## Results Key

<b>Negative</b>	No BVDV detected; sample negative for BVDV Persistent Infection (PI).
<b>Positive</b>	BVDV detected; sample positive for BVDV Persistent Infection (PI). *Confirmation of BVDV status is strongly recommended.
<b>Inconclusive</b>	Sample tested weakly positive for BVDV but a final diagnosis regarding the BVDV status cannot be made at this time. Presence of BVDV may be from recent vaccination with modified live vaccine, from recent BVDV infection, or from being truly PI. **Confirmation of actual BVDV status is strongly recommended.
	<p>**It is highly recommended that all positive samples have a fresh ear notch <u>and</u> whole blood sent in for confirmatory testing.</p> <p><b>Confirmatory testing is conducted at no charge.</b></p> <ul style="list-style-type: none"><li>• Samples should be collected at least 3 weeks after previous sample was taken.</li><li>• The ear notch can be stored in a plain red top tube or a clean ziploc bag (do not store sample in formalin).<ul style="list-style-type: none"><li>◦ Whole blood should be in a purple top tube.</li><li>◦ The samples should be sent with an ice pack.</li><li>◦ The samples can be sent directly to Neogen from the customer.</li></ul></li><li>• There should be a note that indicates that this is confirmatory BVDV testing as this will ensure that we can provide the fastest results and ensure that no charge is invoiced for the confirmatory order.</li><li>• To streamline the process it would also help to have the package sent with Attn to Vet Diagnostics.</li></ul>
